this e-mail to your EPA colleagues who track policy news and information. They can click here to sign up for direct access.

Greenwire -- Wed., October 31, 2012 -- Read the full edition

1. HURRICANE SANDY: 'New reality' grips storm- and flood-ravaged New York City region

NEW YORK -- Gov. Andrew Cuomo set the tone for Hurricane Sandy recovery efforts here yesterday when he declared a "new reality" had emerged for a city still reeling from an unprecedented storm surge and subsequent water intrusion that crippled its ability to function. The hurricane, pushed to the west from the Atlantic Ocean into New Jersey by an old-fashioned nor'easter, forced the low-lying city to close its subway system for the second consecutive year and left millions without electricity. More costly, perhaps, were images of water flooding into subway and car tunnels at an unprecedented clip and the East River creeping well past First Avenue into the east side of Manhattan.

2. HURRICANE SANDY: Scientists see extent of storm's damage linked to climate change

For many, reports of Hurricane Sandy's massive reach and destructive potential raised a simple question with a complex answer: Is this climate change? The answer, experts say, is a qualified "yes."
